24 pcs Biomaster: art. 25500002F/24

49 pcs Biomaster: art. 25500002F/49

The special shape of Stabila allows stability of the eggs while the egg tray oscillates. It is compatible with all River Systems incubators or similar.

The body is made of plastic and has two versions: the normal one and the one with Biomaster™ (permanent antibacterial silver ion additive).

The Biomaster™ is a safe and effective system for controlling the proliferation of harmful bacteria as it works against viruses, more than 50 different types of bacteria and mould. The Biomaster™ additive is incorporated into the matrix from which the plastic body of the incubators is moulded and therefore guarantees maximum anti-bacterial protection throughout the life of the incubator. This treatment does not affect the mechanical performance.

## PRODUCT DETAILS

riversystems.it

### Large eggs

The egg is placed in the centre of Stabila.

### Medium-sized eggs

The egg is placed in the centre of Stabila and stabilised by means of a rubber band hooked to the 4 pins.

### Small eggs

The four eggs are placed on the four outer cells and stabilised by means of an elastic band weaved to the four pins of Stabila.
