

Brinsea Mini and Maxi incubators

Small capacity without compromise.

The Brinsea Mini and Maxi incubators are small, high quality, low cost egg incubators combining ease of use, performance and value.

All models feature all round visibility of your hatching eggs, convenience of external water top-up and the latest technical innovations drawn from Brinsea's 40 year experience in egg incubator design.

The Mini holds 7 hens eggs (10 in the manual turn Eco model) and the NEW Maxi 24 holds 24 hens eggs (30 in the manual turn Eco model). Other egg sizes from quail to duck can be accommodated – see egg handling section opposite.

The Eco models require more user involvement with manual egg turning needed twice a day whereas the Advance turns the eggs automatically and provides digital control of temperature, including alarms to warn of power failure and incubation temperature fluctuations, periodic cooling option and Brinsea's new patented room temperature alarm.

The EX model adds fully automatic and highly accurate humidity control and more turning options including additional egg disk quadrants to accommodate all egg sizes at a new, lower cost.

The Maxi II Eco, with its high capacity and manual turning is also ideal as a hatcher, in conjunction with a separate setter, for multi-stage incubation.

These models can also be powered from a 12v car cigarette lighter type socket with a suitable adaptor (part number 15.45).

All Brinsea Mini and Maxi models incorporate Biomaster antimicrobial additives in the plastic which reduces the risk of contamination causing unexplained embryo failure. See www.brinsea.co.uk/antimicrobial for more details.

Six models in two sizes and three feature levels mean there is an ideal model for every breeder.

Ideal for small scale hatching with all-round visibility and easy to use

Keep your incubator clean and help prevent splayed legs with recyclable hatching mats.

Available in packs of 6. Part number 14.901 (Mini) and 14.902 (Maxi)

Watch your eggs hatch, every time...
